# Building Indonesia Hand in Hand

The upstream oil and gas sector has left its mark on the daily lives of the Bojonegoro community. It's common to see various programs and partnerships with the locals in the areas where operations take place. The Oil and Gas Revenue Sharing Funds in Bojonegoro Regency have highlighted how the industry contributes to local development.

Moreover, the strong focus on safety in the oil and gas industry has taught valuable lessons to people living near the Banyu Urip Oil Field. This safety mindset is deeply ingrained in their shared memories. Some learned about it while working there, while others picked it up through community activities. For example, employees shared safety stories with students at SMPN 1 Gayam.

Working together, supporting each other, and prioritizing safety are crucial for reaching Indonesia's oil production goals. This is essential for meeting the energy needs of all Indonesians.

Contribution to the nation can also come through exercising our political rights, such as voting for national leaders in the February 14th election. This fundamental right belongs to us as citizens, and it's imperative that all parties ensure its fulfilment, mirroring the actions taken by the workers at the Banyu Urip Field and FSO Gagak Rimang.

Lastly, I want to emphasize that the advancement of this development relies on the collective efforts of each and every one of us. Let's join hands to guarantee that all operations proceed seamlessly, with safety and security as our utmost priorities.

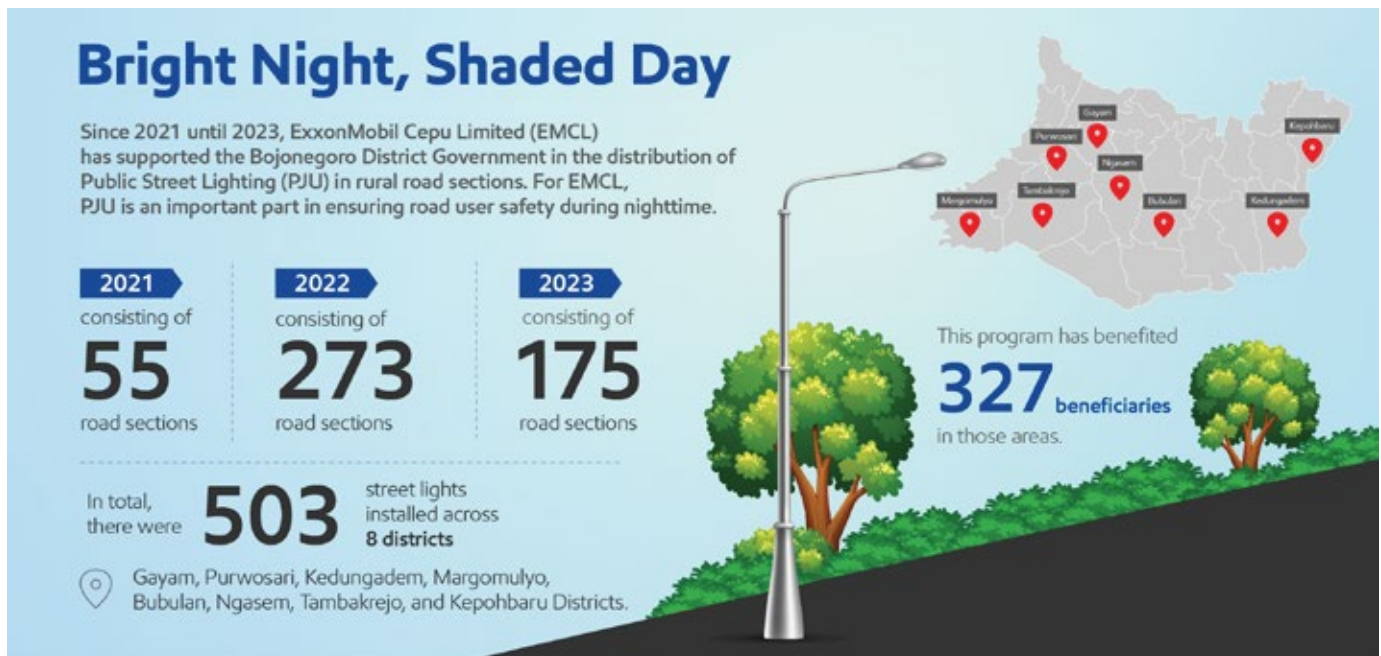

"Let's continue in nurturing this strong bond, fostering open communication and mutual understanding, and reinforcing our resolve to build a brighter future for Indonesia." •

# Passing on Safety Culture for Future Generations

Celebrating Health and Occupational Safety Month (K3) by educating students about the importance of fostering safety in daily activities.

From mid-January to February, workers at the Banyu Urip Field commemorated the Health and Occupational Safety Month (K3). Various activities such as discussions, running competitions, blood donation drives, and safety video contests were held with great enthusiasm. Occupational Health and Safety became the main topic of conversation throughout the month. However, what left the most lasting impression on them was the opportunity to engage with the students of SMP Negeri 1 Gayam District.

Addressing 90 ninth-grade students, the workers shared their experiences and knowledge about safety practices, advocating for a healthy lifestyle, and providing insights into careers in the upstream oil and gas sector, particularly in safety-related roles.

Following the classroom session, students participated in a practical fire extinguishing exercise. Here, they learned how to handle small fires using everyday household items and observed the use of Fire Extinguishers. •

Students of SMP Negeri 1 Gayam District receiving training on extinguishing household fires.

Workers at the Banyu Urip Field sharing experiences and knowledge about safety culture in the upstream oil and gas industry and in everyday life.

Muhammad Angga, a 9th-grade student, practicing safe handling of a leaking gas cylinder.

**“This was such an interesting and unique experience. I learned that at the Banyu Urip Field, the safety culture is incredibly strong.”**

**Muhammad Angga**

# Bright Night, Shady Day

Representatives from the Government, the community, and EMCL agree to continue nurturing the planted trees to grow and benefit road users.

**The roads are smooth, facilitating transportation, but they can be dangerous when it's dark. Accidents can occur due to impaired visibility. Therefore, street lighting is a safety factor at night.**

Road construction in Bojonegoro is quite massive. Asphalt and concrete roads are built from the outskirts of the regency to the city center. The significant local budget allows for this continuous development.

To support rider safety, since 2021, ExxonMobil Cepu Limited (EMCL) has been assisting the Bojonegoro Regency Government in installing Public Street Lighting (PJU). At least 327 thousand residents benefit from 503 lights installed at various points in 8 sub districts as part of EMCL's Community Development Program (PPM).

Moreover, in the PJU in Panjang Village, Kedungadem sub district, EMCL, along with partners and the community, also conducted a collective effort to plant hundreds of trees. Through this program, the community now enjoys comfortable driving conditions, as the night is bright, and the day is shady. •

The village government, along with residents and community leaders, collectively plant trees next to the Public Street Lighting in Kedungadem Village, Kedungadem Sub district, Bojonegoro Regency.

The EMCL PJU program involves the Government and stakeholders to ensure alignment with community needs and long-term functionality of the lights.

PJU installations are ensured to meet Government standards and maintain high quality.

**"The road access is much more comfortable now when driving at night. It's more comfortable because the visibility is clearer, and we're not afraid of security issues."**

**Hari Hartono**  
Panjang Village, Kedungadem Sub district

# Cepu Creative Community: Empowering SMEs with Modern Facilities

EMCL constructs exhibition spaces to showcase and sell SME products in Bloro Regency.

The Bloro Regency Government's aspirations for accelerating economic growth have received support from various parties, including ExxonMobil Cepu Limited (EMCL) through the Cepu Creative Community (CRECO).

The competition among Small and Medium Enterprises (SMEs) has become increasingly sophisticated. Technological advancements have shifted competition towards digital dominance. This situation has prompted the Bloro Regency Government to provide guidance and support for SMEs to adapt to contemporary trends.

CRECO serves as a platform to empower SMEs in Bloro Regency to compete effectively. At least 44 SMEs have joined this ecosystem. Ademos Indonesia, a partner in EMCL's program, has conducted mapping of SMEs and potential markets. The goal is for SMEs not only to succeed locally but also to thrive in broader markets. •

The Chairperson of the Bloro Regional Craft Council (Dekranasda), witnessed by the Regent of Bloro, the SME Department, EMCL, and Ademos Indonesia, inaugurates CRECO in December 2023.

SME entrepreneurs have a venue to exhibit and market their products at CRECO's exhibition spaces.

Cepu's small businesses sell at CRECO, boosting the local economy.

Regent of Bloro, Arief Rahman, overseeing CRECO's exhibition spaces and ensuring that Bloro's SMEs are accommodated within this established ecosystem.

**"CRECO is expected to drive the economy of Cepu and its surroundings, aligning with the development of the Cepu Raya Region in the future."**

**Arief Rahman**  
Regent of Bloro

# Hard Work to Meet National Energy Needs

Before leaving home, Janar seeks blessings from his wife and children.

**Every morning before heading to work, Janar always prays, hoping that his work can be done quickly, safely, and as expected.**

Janar began his career as a roustabout in the Banyu Urip Field drilling project back in 2012. His job, assisting the entire drilling team, taught him a lot about the importance of safety in the upstream oil and gas industry. The longer he worked, the more he learned about safety.

Today, Janar works as an assistant driller on the Banyu Urip Infill & Clastic (BUIC) drilling project. He realizes the importance of his role in the project aimed at increasing the oil reserves of the Banyu Urip Field by 42 million barrels. Every day, he ensures that he works without injury and returns home safely.

Originating from Bonorejo Village, Gayam Sub district, Bojonegoro Regency, this man never takes a step without ensuring that everyone is in a safe position. He tirelessly reminds others to plan, execute, and evaluate work according to safety procedures. He even doesn't hesitate to help colleagues to ensure that the work is completed on time while maintaining a focus on safety. ▪

Janar ensures that the equipment to be used functions properly, safely, and as intended.

For Janar, his colleagues are like family, and their safety is paramount. They work diligently to ensure everyone stays injury-free.

**"I leave in the morning with the intention of blessing others. I hope that every moment of worker safety yields abundant blessings."**

## Janar

Assistant Driller from Bonorejo Village, Gayam Sub district, Bojonegoro.

## Raising Goats and Spreading Prosperity

Each member of the livestock group receives guidance from experienced farmers who have been successful in goat farming with effective and successful methods.

**In the livestock group of Bareng Village, Ngasem Sub district, Bojonegoro, the goat population continues to thrive. What started as a goat farming initiative with 40 goats has now flourished to 98.**

Every morning, as dawn breaks, Tarmuji, a 56-year-old farmer, eagerly heads to tend to his livestock pen. As the group leader in Bareng Village, he takes immense joy in witnessing the healthy growth of his goats, paying close attention to their well-being each day. With some of the goats expecting, there's anticipation for more additions to the group in the near future.

Tarmuji finds fulfillment in ensuring that all participants in the Community-Based Goat Farming Program of Bareng Village receive their fair share of goats, enabling them to nurture their own herds. Through the implementation of a rotational livestock system, 25 members of Tarmuji's group have become goat owners themselves.

In February 2023, ExxonMobil Cepu Limited (EMCL), in partnership with the community-based organization LIMA 2B, distributed 40 goats. Throughout the program, mentors provided valuable insights into effective goat farming practices and fostering mutually beneficial group dynamics. Within a span of less than 8 months, the goats have birthed a total of 58 younglings.

Each member of the group receives their portion of the newborns. Guided by a Tried-and-Tested Standard Operating Procedure (TSOP), this livestock initiative brings sustainable benefits to the community, addressing issues such as maternal and infant survival rates, task allocation, trade mechanisms, and managing member transitions within the framework. •

The Ngasem Sub-district Head, along with the Sub district Leadership Forum and community leaders, sees this program as worthy of becoming a model.

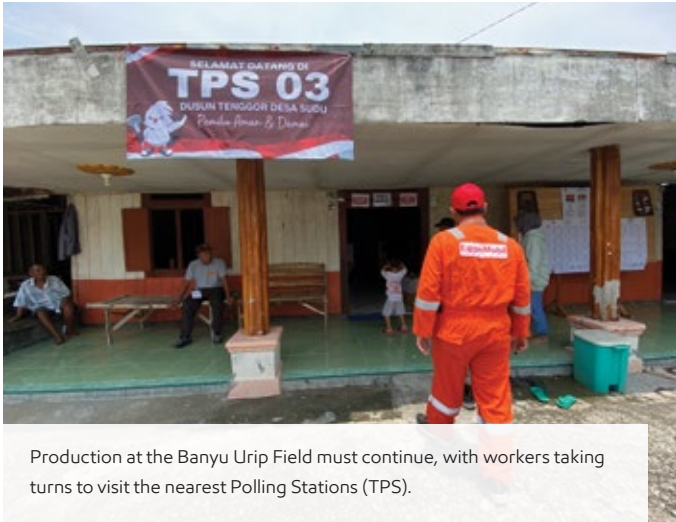

Tarmuji, the Head of the Livestock Group in Bareng Village, ensures the health and reliability of the goat dams and studs in producing healthy offspring.

**"We see this as a great example of community farming. It's worth copying in other areas."**

**Iwan Sopian**  
Ngasem Sub district Chief

# Playing Our Part: Shaping Indonesia's Tomorrow

Production at the Banyu Urip Field must continue, with workers taking turns to visit the nearest Polling Stations (TPS).

Workers from the Banyu Urip Field casting their votes at the Sudu Village Polling Station, Gayam Sub district, Bojonegoro Regency.

**The state ensures that all citizens can exercise their choices in elections. ExxonMobil Cepu Limited (EMCL) also ensures that every worker in the operational area obtains this political right. This includes personnel working on the FSO Gagak Rimang.**

The Indonesian General Election of 2024 took place on February 14th. Although the government declared it a public holiday, national oil production must not halt. Therefore, workers still on duty must be given time to go to the polling stations and cast their votes.

Well before the election date, the EMCL team communicated with the election organizers to ensure that every worker could participate in voting. Some had to arrange for voting transfers to receive ballot papers.

When the time came, workers at the Banyu Urip Field were facilitated to vote at the polling stations in Sudu Village and Ngraho Village, Gayam Sub district, Bojonegoro Regency. Meanwhile, FSO Gagak Rimang personnel cast their votes at the polling station in Paciran Village, Paciran Sub-district, Lamongan Regency. •

**“I am grateful today to be able to take part in determining the leader of Indonesia.”**

**Hendra Apriyawan**  
Worker at Banyu Urip Field

The workers exercise their voting rights freely, with a spirit of contributing to the nation's development.
